Braids and the PL Sphere

Anand Deopurkar

Australian National University

# Braid group C'Sphere

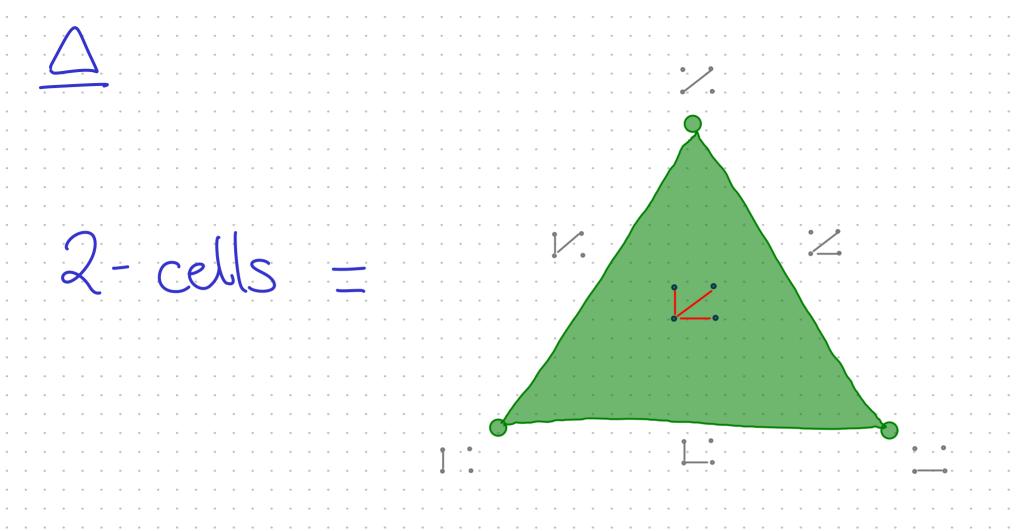

#### Fix n. For example n = 4.

Simplicial

Simplicial Complex D

O-cells =

1, Cells =

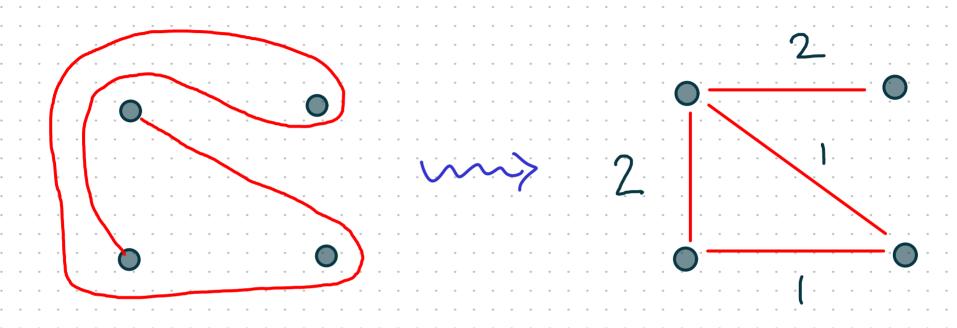

i-cells = { it 1 non crossing Segments}

Theorem: For n points, the Simplicial Complex  $\Delta$  is homeomorphic to  $B_{2n-4}$ . (Tamari, Stascheff, Milnor 1950-60) The top cells of  $\Delta$  are (Triangulations - external edge)

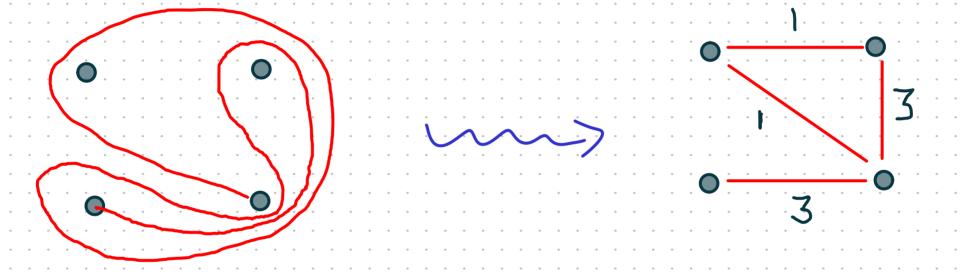

# Braid group C Sphere 2

Simple curve connecting two of > the n-points & otherwise staying away from them (up to 1sotopy)

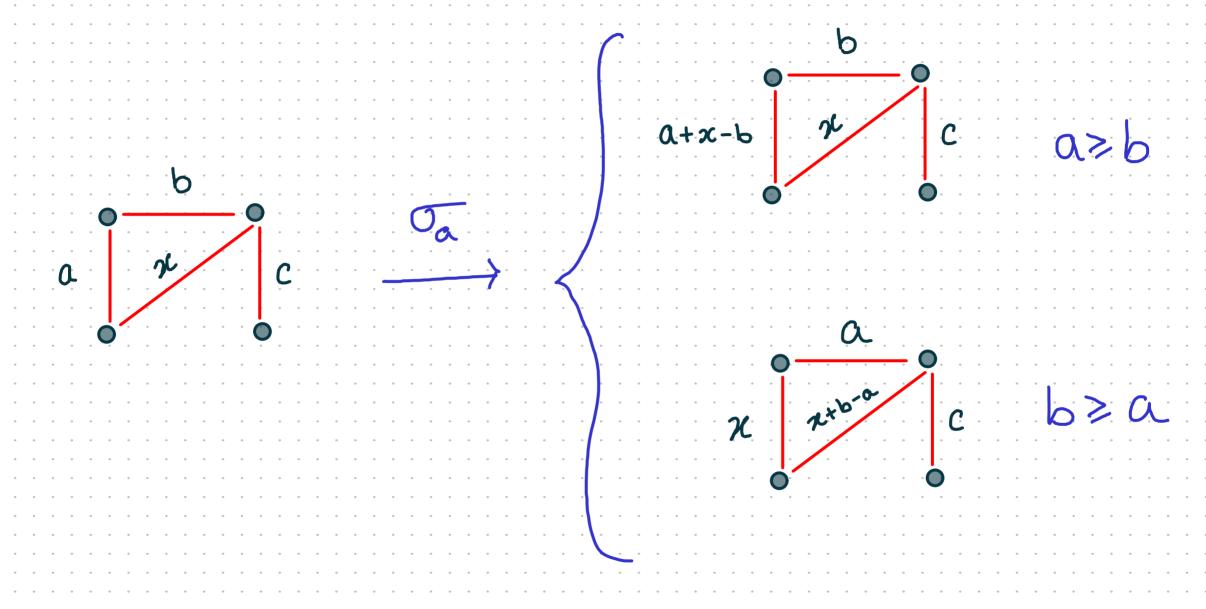

### Arc mon 2

## Arc mon Point on Z

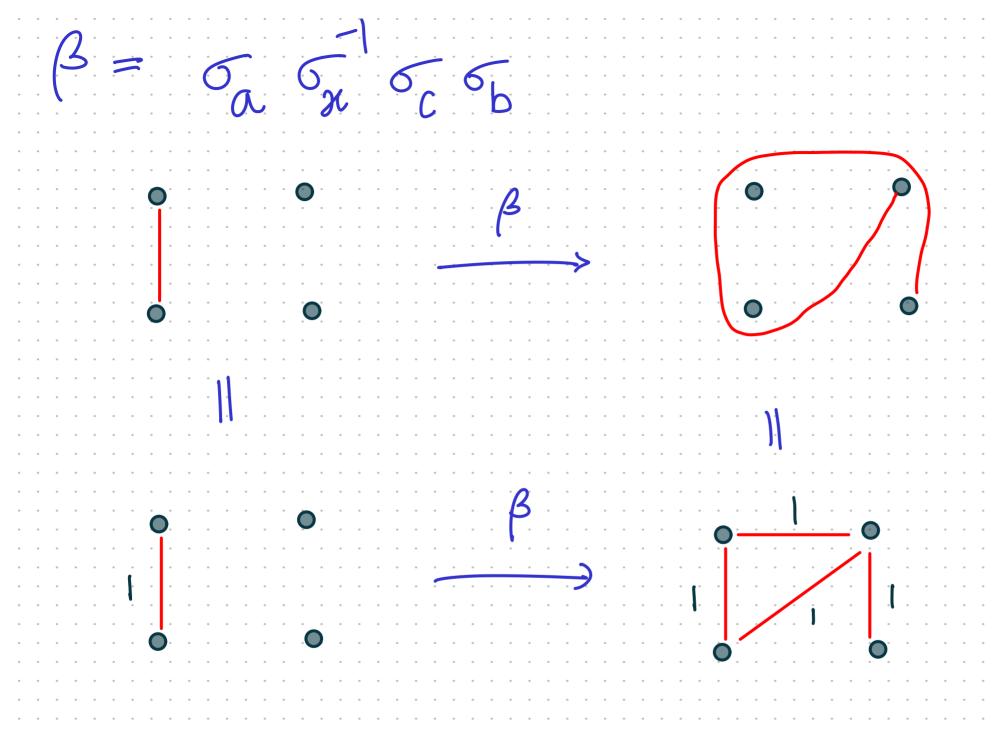

Arcs Braids Braids . The map above is injective & its image is dense. (Bapat, -, Licata) 2. The Bny action on [Arcs] by Dehn twists extends to an action on Z by PL homeomorphisms

# Braid group C'Sphere 2

# Dynamics What happens when we Herate a braid? Example

$$\beta = 6 \cos \alpha \cos \alpha \cos \alpha$$

Entropy of B  $e(\beta,c):=\limsup_{n\to\infty}(size\beta^{n}c)^{n}$ Super C (B,C)  $e(\beta) :=$ Conjecture (algebraicity of entropy) e (B,c) and e (B) are algebraic. Conjecture (algebraicity of entropy) Question of Dmitnov, Haiden, Katzarkov, Kontsevich "Dynamical systems & Categories"

(2014)

## Dynamical systems & Categories

 $F : C \rightarrow C$ 

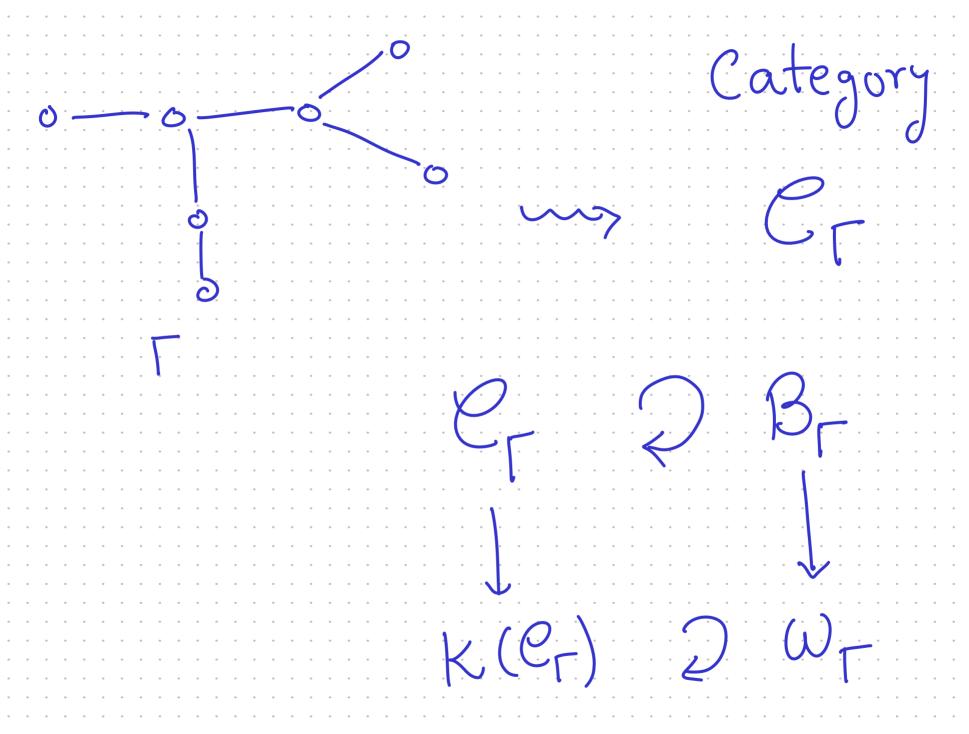

a: Is the dynamics of Flike

The dynamics of a linear map?

Dynamics of F: C-C

## Dynamical systems & Categories $F : \mathcal{C} \to \mathcal{C}$ a: Is the dynamics of Flike the dynamics of a linear map? $e(F) = \sup_{c \in \mathcal{C}} \lim_{n \to \infty} |\beta^n_c|^n$ Define

condeprair ? "largest eigenvalue"

For T = 0-0-0-0-0

Arcs in Objects

## Algebraicity of entropy (expectation)

B C 2 piecewise linear

B ([v]) fixed point

Algebraicity of entropy (expectation)
$$\beta G (ij) = \text{fixed point}$$
Linear

Example -  $\beta = \sigma_a \sigma_x \sigma_c \sigma_b = \begin{pmatrix} 1 & 0 & 1 & 2 \\ 1 & 0 & 0 & 0 \\ 1 & 1 & 0 & 0 \end{pmatrix}$ 

$$33 \quad \text{(1)} \quad \text{(280)}$$

$$37 \quad \text{(280)} \quad \text{(31)} \quad \text{(32)} \quad \text{(33)} \quad \text{(34)} \quad \text{(35)} \quad \text{(34)} \quad \text{(35)} \quad \text{(34)}$$

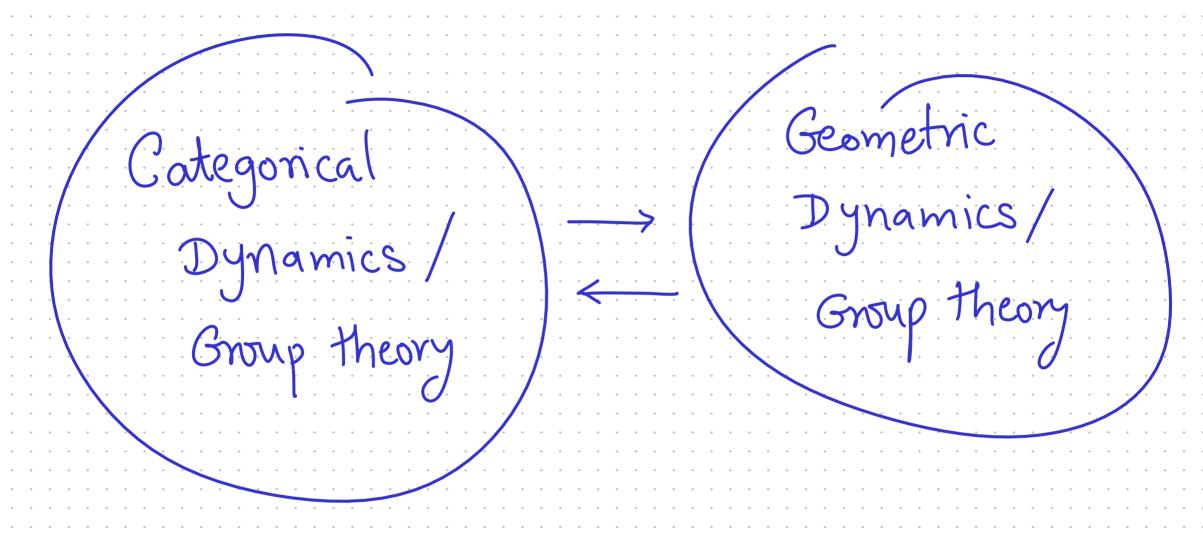

$$e = \frac{1}{2} \left( \sqrt{5} + \sqrt{2 + 2\sqrt{5} + 1} \right) \approx 2.9$$

### Dynamics of Categories

F: C -> C

How does the HN filtration evolve ?
Piecewise linear

Eventually linear

Mank you!
